Bronx Community Health Dashboard: Gynecologic Cancers (Cervical, Ovarian, and Uterine Cancers)

Last Updated: 9/24/2019

See last slide for more information about this project.
Ovarian cancer incidence
The Bronx has the lowest ovarian cancer rate as compared to other NYC boroughs.

Ovarian cancer rates have declined by 26% in the Bronx overall.

In the Bronx, the ovarian cancer rate is highest among non-Hispanic white women.

Mortality from ovarian cancer
The mortality rate from ovarian cancer in the Bronx is average compared to other NYC boroughs.

Mortality rates from ovarian cancer have declined by 28% in the Bronx overall.

In the Bronx, the mortality rate from ovarian cancer is highest among non-Hispanic white women.

Cervical cancer incidence
The cervical cancer rate is about average in the Bronx.

Cervical cancer rates have decreased by 45% in the Bronx

In the Bronx, the cervical cancer rate is highest among non-Hispanic black women.

Mortality from cervical cancer
In the Bronx, cervical cancer mortality rates are higher than in other NYC boroughs.

![Bar chart showing age-adjusted mortality rate from cervical cancer per 100,000.](chart)

- Bronx: 3.5
- Brooklyn: 2.9
- Manhattan: 2.2
- Queens: 2.6
- Staten Island: 2.6
- NYC overall: 2.7

Mortality rates from cervical cancer have decreased by 50% in the Bronx

In the Bronx, the mortality rate from cervical cancer is highest among non-Hispanic black women.

Uterine cancer incidence
The uterine cancer incidence rate is about average in the Bronx.

Uterine cancer incidence rates have increased by 59% in the Bronx.

In the Bronx, the uterine cancer incidence rate is highest among non-Hispanic white women.

Mortality from uterine cancer
In the Bronx, the uterine cancer mortality rate is higher than other NYC boroughs

<table>
<thead>
<tr>
<th>Borough</th>
<th>Age-adjusted mortality rate from uterine cancer per 100,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bronx</td>
<td>8.9</td>
</tr>
<tr>
<td>Brooklyn</td>
<td>7.0</td>
</tr>
<tr>
<td>Manhattan</td>
<td>6.5</td>

<tr>
<td>NYC overall</td>
<td>6.7</td>
</tr>
</tbody>
</table>

Mortality rates from uterine cancer have increased by 42% in the Bronx

In the Bronx, the uterine cancer mortality rate is highest among non-Hispanic white and black women.

About the Community Health Dashboard Project

- The goal of the project is to provide Bronx-specific data on risk factors and health outcomes with an emphasis on presenting data on trends, socio-demographic differences (e.g., by age, sex, race/ethnicity, etc.) and sub-county/neighborhood level data.

- Data will be periodically updated as new data becomes available.

- Produced by Montefiore’s Office of Community & Population Health using publicly-available data sources.

- For more information, please contact us at OCPHDept@montefiore.org.
